This office action is responsive to communications filed 04/05/04.

Claims 1 – 21 are pending.

1. Claims 1 – 21 are allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art of record neither shows nor teaches a combination for the claimed method that comprises in combination with other recited element, sensing the fluid pressure in the fluid path upstream of the valve member to provide a first signal to a controller, sensing fluid pressure in the fluid path downstream of the valve member to provide a second signal to the controller, and sensing fluid flow downstream of the valve member to provide a third signal to the controller, the controller comparing the first and second signals and applying the third signal, and depending on the comparison of the first and second signals and the third signal, the controller signaling an alerting device which indicates whether the valve member is in at least one of an open and the closed position. Also the prior art of record neither shows nor teaches a combination for the claimed apparatus that comprises in combination with other recited elements a first sensor for sensing the fluid pressure in the fluid path upstream of the valve member to provide a first signal, a second sensor sensing fluid pressure in the fluid path downstream of the valve member to provide a second signal, and a third sensor sensing fluid flow downstream of the valve member to provide a third signal, a controller for comparing the first and second signals and applying the third signal, and depending on the comparison of the first and second signals and the third signal, the controller being configured so that, depending upon the comparison of the signals, the controller
